

# NOVOHALL Rotary Sensor non-contacting

Series RSB-3600 Series RMB-3600

#### Special features

- Non-contacting, hall technology
- Measuring range up to 5760°
- Single- and multiturn
- True-Power-On system: counts turns even when not powered.
   Patented non-volatile technology does not require gears or batteries
- Solid shaft or hollow shaft
- Protection class IP67, IP6K9K
- Optimized for industrial and mobile applications
- Resolution 12 bit (singleturn) or up to 18 bit (multiturn)
- Absolute linearity up to ±0.03 %
- One and multi-channel versions

#### **Applications**

- Mechanical engineering
   Textile machinery
   Packing machinery
   Sheet metal and wire working machinery
- Medical appliances
- Mobile machinery Industrial trucks
   Construction machinery
   Agricultural and forestry machinery
- Navy applications

Non-contacting Rotary Sensor in very robust design including a double bearing system in a compact OD 36 mm full metal housing.

The sensor is based on the Hall technology and the True-Power-On multiturn additionally utilizes the GMR technology (Giant Magneto Resistance) for measurements of up to 16 revolutions.

The heavy-duty version in IP6K9K ingression protection version is well suited for extreme environment applications including high bearing loads.

The semi-hollow shaft version with its integrated stator coupling obsoletes a costly

separate shaft coupling. Versions with an industry standard M12-connector or cable in different lengths are available.

There is a wide variety of analog and digital electrical interfaces to choose from.

#### Special features

- Supply voltage 10 ... 30 VDC, 80 ... 250 V DC or AC
- high accuracy
- direct connection of potentiometric and standardized signals
- adjustable supply voltage for sensoren 5 ... 24 V
- Temperature coefficient 100 ppm/K
- optional RS 232, RS 485, analog output, limited switch
- complete data see separate data sheet MAP-4000

The specifications contained in our datasheets are intended solely for informational purposes. The documented specification values are based on ideal operational and environmental conditions and can vary significantly depending on the actual customer application. Using our products at or close to one or more of the specified performance ranges can lead to limitations regarding other performance parameters. It is therefore necessary that the end user verifies relevant performance parameters in the intended application. We reserve the right to change product specifications without notice.

# NOVOHALL Rotary Sensor non-contacting

Series RSB-3600 Series RMB-3600

#### Special features

- Non-contacting, hall technology
- Measuring range up to 5760°
- Single- and multiturn
- True-Power-On system: counts turns even when not powered.
   Patented non-volatile technology does not require gears or batteries
- Solid shaft or hollow shaft
- Protection class IP67, IP6K9K
- Optimized for industrial and mobile applications
- Resolution 12 bit (singleturn) or up to 18 bit (multiturn)
- Absolute linearity up to ±0.03 %
- One and multi-channel versions

#### **Applications**

- Mechanical engineering
   Textile machinery
   Packing machinery
   Sheet metal and wire working machinery
- Medical appliances
- Mobile machinery Industrial trucks
   Construction machinery
   Agricultural and forestry machinery
- Navy applications

Non-contacting Rotary Sensor in very robust design including a double bearing system in a compact OD 36 mm full metal housing.

The sensor is based on the Hall technology and the True-Power-On multiturn additionally utilizes the GMR technology (Giant Magneto Resistance) for measurements of up to 16 revolutions.

The heavy-duty version in IP6K9K ingression protection version is well suited for extreme environment applications including high bearing loads.

The semi-hollow shaft version with its integrated stator coupling obsoletes a costly

separate shaft coupling. Versions with an industry standard M12-connector or cable in different lengths are available.

There is a wide variety of analog and digital electrical interfaces to choose from.

#### Special features

- Supply voltage 10 ... 30 VDC, 80 ... 250 V DC or AC
- high accuracy
- direct connection of potentiometric and standardized signals
- adjustable supply voltage for sensoren 5 ... 24 V
- Temperature coefficient 100 ppm/K
- optional RS 232, RS 485, analog output, limited switch
- complete data see separate data sheet MAP-4000

The specifications contained in our datasheets are intended solely for informational purposes. The documented specification values are based on ideal operational and environmental conditions and can vary significantly depending on the actual customer application. Using our products at or close to one or more of the specified performance ranges can lead to limitations regarding other performance parameters. It is therefore necessary that the end user verifies relevant performance parameters in the intended application. We reserve the right to change product specifications without notice.
